Security Tips

70. What are the ways to keep my PIN secure?

It is essential that you keep your PIN a secret, so that your Card is protected against fraud in the event your Card is lost or stolen. You must ensure that your PIN is not easy to guess by avoiding numbers that can be associated with you, such as significant personal dates (e.g. your birthday or anniversary), telephone numbers, or driver's license number. Other measures to keep your PIN safe include:

- Do not keep a written record of your PIN;
- Do not allow another person to see your PIN when you enter it;
- Do not keep your PIN in a form that can be readily identified as a PIN;
- Do not disclose your PIN to any other person;
- Do not negligently or recklessly disclose your PIN;

Change your Card PIN using the Mobile Application and notify Merchantrade immediately if you become aware that your PIN has become known to someone else.

For online shopping transactions

➤ Passwords

- Use a hard-to-guess password that contains upper and lower case letters, numbers, and symbols.
- Change passwords as often as possible, at least every three months.
- Do not share your passwords or user identification information. A scam may involve emails that appear to be from a user's Internet provider, requesting this information. Internet providers, banks, card issuers and reputable Internet businesses never contact customers to request their passwords or usernames.
- Never click on any links in emails asking for identification information. Contact the institution by phone immediately to report the concern.

- Keep Impeccable Records
 - Keep records of every Internet purchase and transactions and compare them with Card statements monthly. Report any discrepancies immediately to the issuer of your Card.
- Personal Information Protection
 - Do not post your full birth date on social networking sites. Do not post the birth dates of your children, spouse, or significant other.
 - Any information you post online can be hacked or stolen, so try to keep this information to a minimum.
- Online Shopping Tips
 - Always log out of bank, card issuer and merchant sites after you have completed your transaction.
 - Do not allow your computer to store usernames and passwords for merchant or banking websites.
- Where Not To Shop
 - Do not shop, pay bills or access your bank or card issuer websites using public Wi-Fi connection. Shop from home and only over a secured Internet connection.
 - Do not use “easy pay” payment options or “one-click ordering”. It takes a few extra seconds to enter a username and password on a merchant site but often takes months to recover from online card fraud.
 - Use the most up-to-date version of your Internet browser. They will use the most recent technology to scramble and protect data sent via the Web.
- Firewalls
 - Always use the most up-to-date version of a strong anti-virus and firewall security programme.
 - Download and apply updates from your virus and firewall programmes when available, to ensure the programmes have the latest information about new scams and hacker tricks.
- Secure E-Commerce Websites
 - Use secure e-commerce websites that support Verified-by-Visa whenever possible. These 3D-secure sites provide secure online transactions.
 - Secure online transactions should occur only on a website that begins with https://. Do not trust a vendor without the “s” after the “http” at the start of the web address.
- How to Shop Safely
 - Pay attention when visiting shopping websites. Secure websites will post logos such as Verified-by-Visa (VbV).
 - VbV shopping sites require the cardholder to use a One-Time-Password (OTP) triggered by the card issuer to the cardholder.
- Anti-Virus Programmes
 - Run virus scans regularly on your computer.
 - Use an ad-blocking software programme and a spyware detection programme. Keep these programmes updated and run scans often with them.
- Email Security
 - If an email, instant message, chat request or Internet site appears suspicious, close your browser and email programs and shut down your computer for a time. When you restart the computer, run a full virus and spyware scan before logging back on to the Internet.
